

# ARYAN SUTHAR

Software Engineer

Arizona, USA | 602-341-3666 | aryan.s@itjobinbox.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

## SUMMARY

Backend-focused Software Engineer with 4+ years of experience building distributed, cloud-native applications and AI-integrated data platforms. Skilled in event-driven architecture, microservices, and scaling data pipelines across AWS and Azure, with hands-on experience applying generative AI techniques to data quality automation and a proven record of measurable performance and reliability improvements.

## SKILLS

**Languages:** Java, Python, TypeScript, JavaScript, SQL

**Backend & APIs:** Spring Boot, Flask, REST, GraphQL

**Frontend:** React, TypeScript, Redux

**Cloud & Infrastructure:** AWS (Lambda, S3, SQS), Azure (AKS, Blob Storage, Virtual Machines, Azure Functions), Docker, Microservices

**Event Streaming:** Apache Kafka, Event-Driven Architecture, Message Queues

**Databases:** SQL Server, MySQL, MongoDB, Query Optimization, Indexing, Stored Procedures

**DevOps & CI/CD:** Jenkins, GitHub Actions, CI/CD, Azure Monitor, Application Insights

**Testing:** PyTest, TDD, Unit & Integration Testing

**Practices:** Agile/Scrum, JIRA, Git

**Core CS:** Data Structures & Algorithms, Object-Oriented Design (OOD), Distributed Systems

## WORK EXPERIENCE

**Avnet**, Arizona, USA

December 2025 – Present

Software Engineer

- Designed and developed backend microservices using Python and Flask, supporting data ingestion, transformation, and core business logic across 7+ services, streamlining internal data workflows.
- Built and maintained relational data storage using SQL Server, writing optimized queries and stored procedures for transactional data, ensuring accuracy and performance in order and inventory management systems.
- Created a GraphQL aggregation layer that unified data from multiple microservices (SQL Server, MongoDB), enabling frontend clients to retrieve complete datasets in a single call and reducing page load times by 60%.
- Integrated the platform with AWS cloud services, including SQS for reliable message queuing and S3 for secure file storage; deployed AWS Lambda functions for serverless data validation, processing an average of 20,000 records per day.
- Contributing to an ongoing event-driven backend workstream using Java, Spring Boot, and Apache Kafka, supporting reliable asynchronous processing and horizontal scalability for a high-throughput pipeline (2M+ daily transactions) in a cloud-native Azure AKS environment.
- Incorporated AI-powered data validation and generative AI techniques to automate anomaly detection in incoming product and supplier data, reducing manual review effort.
- Wrote a comprehensive PyTest suite with stubs and mocks to isolate service components; containerized services with Docker and configured Jenkins CI/CD pipelines for automated builds, tests, and deployments.

**Orion Technolab**, India

January 2021 – July 2024

Software Engineer

- Developed responsive single-page applications using React.js, TypeScript, and Redux, enforcing strict type-checking and predictable state updates across complex UI modules.
- Built and maintained RESTful microservices with Java and Spring Boot, supporting front-end functionality and cutting average page load times by 30% through optimized API response handling.
- Improved database query performance and data consistency by redesigning MySQL schemas, implementing targeted indexing, and rewriting high-load SQL queries.
- Migrated and managed application infrastructure on MS Azure, utilizing Blob Storage for asset hosting, Virtual Machines for application deployment, and Azure Functions for event-driven processing, reducing monthly infrastructure spend by 25%.
- Standardized build and release processes using GitHub Actions, reducing failed deployments and maintaining 98%+ uptime for production releases.
- Refactored critical backend services to use asynchronous processing and tuned database queries, cutting average API response times by 50% and enabling real-time monitoring with Azure Monitor and Application Insights.
- Participated in Agile/Scrum ceremonies, managed development tasks through JIRA, and coordinated code changes via Git, ensuring consistent delivery across front-end, back-end, and cloud engineering teams.

## EDUCATION

**Master of Science, Software Engineering**

Aug 2024 – May 2026

Arizona State University, Tempe, AZ, USA (GPA: 3.8 / 4.0)

Capstone: PhysioApp AI-Powered Physiotherapy Rehabilitation Platform (Industry Team 16, SER 517)

Relevant coursework: Distributed Systems, Software Architecture, ML Systems Engineering, Software Engineering Practicum
